A Clinical Pharmacist is like a medicine expert working right in the heart of the hospital, helping to make sure patients get the safest and most effective treatments. Clinical Pharmacists work closely with doctors and nurses on hospital wards—checking prescriptions, adjusting doses, and making sure medicines are right for each patient. One day they might be helping manage the complex medicines of someone in intensive care, and the next they could be reviewing treatment plans for a patient with cancer or a serious infection.

If you're curious about how the body works, you like solving problems, and want a career where you make a real difference, this could be the role for you

CLINICAL PHARMACIST

- Patient care
- Critical thinking
