A Medicines Information Pharmacist is like a medical detective, helping health professionals solve complex medicine-related problems. In Aotearoa they usually work in a hospital, answering tough questions about side effects, interactions, and the best treatments for unique or high-risk patients. Every day is different: one moment they might be helping a surgeon understand how a medicine affects bleeding risk during an operation, and the next they could be researching whether a medicine is safe to use during pregnancy or breastfeeding.

It's a dynamic career path that blends science, problem-solving, and real-world impact — perfect for someone who enjoys learning, supporting others, and making a difference behind the scenes.
